## PREFACE

The following course of study has been designed to set a minimum standard for student performance in the continuous progress sequence. It is primarily a quin for the junior high student who is preparing for algebra. The quin should give direction to the teacher and outline a minimum course content. The objectives are general enough so they will fit a variety of programs, yet specific enough so there is no doubt about what is to be covered in the course.

The course sequence is suggested as a guide; an individual teacher should feel free to rearrange the sequence whenever other alternatives seem more desirable. Since the course content represents a minimum, a teacher should feel free to add to the content specified. No strategies are included due to the individualized nature of this quin course. The teacher may wish to use a variety of materials, methods and/or individualized texts. Assorted materials may be used as long as the minimum objectives of this course have been met.

Any comments and/or suggestions which will help to improve the existing curriculum will be appreciated. Please direct your remarks to the Consultant for Mathematics.

All courses of study have been edited by a subcommittee of the Mathematics Advisory Committee.

## CATALOGUE DESCRIPTION

The first of eight C P quins which will prepare the student for success in Algebra. Includes place value, reading and writing numbers, positive exponents, expanded notation, and elementary set theory.

Designed for the student who wishes to take Algebra in either ninth or tenth grade.
